If the distance between the current transformer and close-by current-carrying conductors is short, the measurement accuracy can be influenced by external magnetic field effects. Please ensure sufficient phase-to-phase clearance (at least 0.2 m) when using current transformers, especially from 2000 A or use optional design with external field protection (ffp5 / ffp10).

#### **SPECIAL DESIGNS (UPON REQUEST):**

- [ffp5 / ffp10] external magnetic field protection, see data sheet 13A1030.3ffp5 / ffp10
- Other ratios, burdens or accuracy classes
- Secondary reconnection
- Cast resin encapsulation
- Highest voltage for equipment 1,2 kV
